FINDINGS	
☒ Normal Examination:	No evidence for congenital heart disease (random or inherited).
☒ Normal Examination:	No evidence for hypertrophic cardiomyopathy <u>at the time of this examination</u> . A normal examination today does not guarantee it will not develop in the future. (If an echocardiogram was not performed, early or mild stages may still be present)
☐ Equivocal Examination:	A congenital or adult-onset genetic heart disease cannot be definitively diagnosed or excluded. Findings point toward: ☐ normal ☐ physiologic or outflow tract murmur ☐ subtle cardiac disorder (see comments below).
☐ Abnormal Examination:	Evidence for ☐ Hypertrophic Cardiomyopathy ☐ Congenital Heart Defect or ☐ Other Adult-onset Cardiac Disorder; with a diagnosis of: _____ Severity: ☐ trivial ☐ mild ☐ moderate ☐ severe

RECOMMENDATIONS	
☒ No cardiac contraindication for elective breeding.	If descendants from this individual develop hypertrophic cardiomyopathy, then a complete evaluation of parents and littermates is recommended.
☐ Hypertrophic cardiomyopathy was found.	Breed specific guidelines should be followed.
☐ Provisional normal examination.	A repeat evaluation within 6-9 months is recommended. Breeding considerations should be delayed until final evaluation.
☐ Treatment Maybe Indicted	_____
Re-evaluation: ☐ none, in ☐ 3 months ☐ 6 months ☒ 12 months ☒ 18 months ☐ 24 months ☐ other
